Pharmaceutical provision in hospitals

- Please shortly describe the key facts and the relevance of the inpatient sector in your country.
- How is the pharmaceutical provision in hospitals organised? (e.g. actors involved, delivery chain,..)
- Please describe the role of hospital pharmacies/hospital pharmacists.
- If possible, draw a simple flow chart of the pharmaceutical provision in the in-patient sector.

Purchasing of medicines in the hospital sector

- Please briefly describe the major pricing/purchasing policies in hospitals? (e.g. statutory pricing, price negotiations, free pricing, procurement, ..)
- Hospital prices: Is there an official price calculation scheme for hospital pharmaceuticals (maximum ex-factory price + maximum mark up + VAT)? Which type of price (ex-factory price, pharmacy purchase price, pharmacy retail price) does the "hospital price" correspond to?
- Are the prices published?
- Who decides which medicines are purchased?

Financing of medicines in the hospital sector

- Who pays for medicines which in-patients receive when they are treated in hospitals?
- Are there co-payments for the patients for medicines dispensed in hospitals?
- What kind of medicine lists are used for medicines used in the hospitals? (e.g. national reimbursement list, individual or national hospitals pharmaceutical formulary, ..)

Evaluation and Interface management

- How are pharmaceutical consumption, prescriptions and prices monitored? (e.g. within a hospital, at national level) Which mechanisms are in place?
- Is there a need for interface management (i.e. mechanisms of cooperation between inpatient and outpatient sector) in your country?
