International Journal of
**Technology
Assessment
in Health Care**

ISSN: 0266-4623

CAMBRIDGE
UNIVERSITY PRESS

Scope

The Journal welcomes submission of manuscripts that **evaluate health technologies to support health policy or practice decisions**: Health Technology Assessments (HTAs), discussion of methods used in HTA, or related policy pieces. Health technologies encompass medicines, devices, diagnostic tools, or interventional procedures including mobile health technologies and telemedicine. We **publish secondary research**, for example **systematic literature reviews, modeling studies, or economic evaluations**, while primary research (such as diagnostic or treatment studies) is more suitable for relevant specialty journals. We do not publish papers on healthcare education, management or IT systems. The evidence for secondary studies commonly originates from **published comparative or non-comparative studies** but may also include **real world data or evidence**. HTAs also incorporates areas relating to **ethics, organizational issues, and patient and citizen involvement**. Where relevant, manuscripts could include a paragraph on the **policy implications** of the findings.

Main target audience

International Journal of Technology Assessment in Health Care serves as a forum for the wide range of **health policy makers and professionals** interested in the **economic, social, ethical, medical and public health implications of health technology**. It covers the development, evaluation, diffusion and use of health technology, as well as its impact on the organization and management of health care systems and public health. In addition to general essays and research reports, regular columns on technology assessment reports and thematic sections are published.
